Self Activating System

Stops Fires Where They Start

Firetrack - Fire Suppression System

Applications - Fork Truck Engines, Battery Chargers, Computer Cabinets, Switch Panels, Agricultural Machinery, Air Conditioning units, Store Cupboards, Covered Bins/Skips

What is Firetrack?

Firetrack is a fully automated self seeking fire extinguisher system, designed for specific designated applications rather than a flood system, though it can be used for this purpose.

Advantages of Firetrack

Firetrack is simple to fit; it has a wide range of applications and can be adapted to suit most requirements.

It is a self activating system that does not rely on electronics, moving parts or external monitors. It is versatile allowing for different areas to be covered by the same unit.

Firetrack uses unique trace tubing that can both detect the fire and deliver the extinguishing media to the heart of the fire.

The trace tube is directly pressurised from the cylinder and is traced around the area of risk to be protected.

Firetrack is available in sizes ranging from 0.75kg up to 9.0kg giving total flood protection for volumes up to approximately 11 cubic metres.

Different extinguishing media are available to suit various applications where contamination or chemical reaction may be critical.
